; Patent No. US20020081680A1
; Patent No. US20020081680A1
; GENERAL INFORMATION:
    APPLICANT: Xu, Jiangchun
; TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY AND
; TITLE OF INVENTION: COMPOSITIONS OF PROSTATE CANCER
; TITLE OF INVENTION: DAGNOSIS OF PROSTATE CANCER
; CURRENT APPLICATION NUMBER: US/09/822,827
; CURRENT FILING DATE: 2001-03-28
; NUMBER OF SEQ ID NOS: 982
; SOFTWARE: FastSEQ for Windows Version 3.0
; SEQ ID NO 822
; LENGTH: 675
; TYPE: DNA
; ORGANISM: Homo sapiens

Squence 834, Application US/09822827

Patent No. US2002081680A1

GENERAL INFORMATION:

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY AND TITLE OF INVENTION: DIAGNOSIS OF PROSTATE CANCER

TITLE REPERENCE: 210121-534C1

CURRENT PILING DATE: 2001-03-28

NUMBER OF SEQ ID NOS: 982

SOFTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 834

LENGTH: 915
                                                                                                                                                                                                                                                               915

/clone lib="Absorsic acid-treated seedlings"
/clone with library was prepared from polyA+ RNA from seedlings grown in hydroponic culture. After 12 days, medium was supplemented with 1 mM abscisic acid (ABA), while leaves were misted with a solution of 1 mM ABA. Roots and leaves were misted with a solution of 1 mM ABA. Roots and leaves were harvested after 3, 6, 12, and 24 hr and material from all time points was combined prior to RNA isolation.
Double-stranded cDNA was cloned unidirectionally into different prail sites of the pMBI85-F13 vector (5-prime DRAII site is CACCATGTG, 3-prime Draili site is

The library was characterised by oligonucleotide fingerprinting

(ONFP) to reduce sequencing redundancy. According to the ONFP

procedure, clones giving the same hybridisation pattern with a

battery of 200 8mer oligonucleotides are grouped into clusters. One

clone per cluster is selected for sequencing. The size of ach

cluster is an indicator of the frequency of a transcript in the

analysed library. The cluster size as well the coordinates of the

rest of the clones assigned to the same fingerprint cluster as the

clone from which the above EST is generated is available at the

amphioxus project site at: http://www.noigen.maphioxus/

Clones and filters are distributed via the Resource Center/Primary

Database of the German Genome Project (http://www.rzpd.de)

Hydrogen (Blumeria infected) "Incompare yield securing Directors (Blumeria infected)"

Note="vector: pBluescript SK(-); Site 1: ECORI; Site 2: Xhol; Morex (Ina) plants were greenhouse grown in the R Wise lab at lows State University, Ames, IA; 7 day old green seedlings were infected with isolate 5874 of Blumeria gramhins f. sp. horded, and leaves were harvested Blumeria gramhins f. sp. horded, and leaves were harvested 24, 48 and 72 hr post-inoculation and snap frozen (Wise). In the TU Close lab at the University of California, Riverside, total RNA was prepared from each sample pool, equal quantities of all three RNA pools were combined, poly(A) RNA was purified from the mixture, one primary unamplified of DNA library was made, and I million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids (Chin). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or abover.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         66 GCAAAGGTGCTTGCTTCTACTGTTGACCTCAGTACATGCCCTGATGGCATCATCTGTGTT 125

This sequence was derived from the PAPESP Schistosoma mansoni EST
Genome Project. All sequences in the project were assembled and
annotated. This entry and all the assembled sequences can be seen
in the following URL http://bioinfo.iq.usp.br/schisto/
Plate: MA3-99990-M294 row: 3 column: C.

Cabernet Sauvignon. Clone 8 disected buds. Samples were collected May 13, 2002 from pre-bloom plants (10-11 days before bloom), pre-veraison. Sampled vines were located at the University of California, Davis, Experimental Vineyard. cDNAs were made by oligo-dT priming and directionally cloned. 5' and 3' adaptors were used in cloning an follows:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CF512107 631 bp mRNA linear EST 09-SEP-2003 6Abud0004 IVR E10 Vitis vinifera cv. cabernet sauvignon (Clone 8) Bud - CABUD Vitis vinifera cDNA clone CAbud0004_IVR_E10 3', mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Vitis vinifera

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                          653

Recombinant nucleic acid molecule for producing high yield expression of desired fusion polypeptides, encodes fusion polypeptide comprising Mycobacterium tuberculosis coding sequence and heterologous polypeptide.
Claim 1; Fig 2; 39pp; English.
The invention relates to a recombinant nucleic acid molecule encoding fusion polypeptide, comprising a polynucleotide sequence of Ral2, a 1kba C-terminal fragment of serine protease antigen MTB32A of
Mycobacterium tüberculosis coding sequence and heterolo Claim 1; Fig 2; 19pp; English. The invention relates to a recombinant nucleic acid mol fusion polypeptide, comprising a polynucleotide sequenc kDa C-terminal fragment of serine protease antigen MTB

WO200125401-A2.

```
Mycobacterium tuberculosis, and a heterologous polynucleotide sequence. The recombinant fusion nucleic acids and polypeptides are useful for providing stable and high yield expression of fusion polypeptides of both eukaryotic and prokaryotic origin and to encode a protein product for use as an antigen for detecting serum antibodies. The presence of serum antibodies to M. tuberculosis antigens in an individual indicates that the individual is infected with it. The fusion polypeptides are useful as sources of proteins for monitoring binding of serum antibodies to fusion proteins and as an immunogen to induce and/or enhance immune responses. The coding sequences can be ligated with a coding sequence of another can be used in vivo as a DNA vaccine. This polynucleotide sequence and represents the DNA encoding the Ral2 protein

The invention relates to a recombinant nucleic acid molecule encoding a fusion polypeptide, comprising a polynucleotide sequence of Ral2, a 14 basion polypeptide, comprising a polynucleotide sequence of Coreminal Fragment of Serine protesse antigen Wib22A of Coreminal Fragment of Serine protesse antigen Wib22A of Coreminal tuberculosis, and a heterologous polynucleotide sequence. The recombinant fusion nucleic acids and polypeptides are useful for providing stable and high yield expression of fusion polypeptides of both eukaryotic and protecting serum antibodies. The presence of Serum antibodies to M. tuberculosis antigens in an individual indicates that the individual is infected with it. The fusion polypeptides are useful as sources of proteins for monitoring binding of serum antibodies to fusion proteins and as an immunogen to induce and/or enhance of menue responses. The coding sequences can be ligated with a coding sequence of another molecule such as M. tuberculosis antigens, a cytokine or an adjuvant and can be used in vivo as a DNA vaccine. This polynucleotide sequence represents the DNA encoding the Ral2, and protein. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                            Recombinant nucleic acid molecule for producing high yield expression of desired fusion polypeptides, encodes fusion polypeptide comprising Mycobacterium tuberculosis coding sequence and heterologous polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure, Fig 5; 39pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This DNA sequence includes a coding region for a recombinant Mycobactezium tuberculosis bi-antigens Ra12 and DPD. The DNA is useful for the motigens Ra12 and DPD. The DNA is useful for the recombinant production of the fusion protein. Coding sequences for the antigens were modified by PCR in order to facilitate their fusion and subsequent expression of the fusion protein, and then ligated. The invention provides fusion proteins (see AAX32059-71) containing at least 2 M. tuberculosis antigens. The new fusion proteins and polynucleotides encoding them are useful as vaccines for preventing tuberculosis (claimed), for diagnosis (via in vitro assays or intradermal skin tests for detection of anti-M. tuberculosis antibodies), monitoring of disease progression, and treatment of tuberculosis. They are more effective immunogens than mixtures of the individual protein components
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      61 GGGCAGGCGATGGCGATCGCGGCCAGATCCGATCGGGTGGGGGGTCACCCCACCGTTCAT 120

```
The invention relates to a recombinant nucleic acid molecule encoding a fusion polypeptide, comprising a polynucleotide sequence of Ral2, a 14 Mycobacterium tuberculosis, and a heterologous polynucleotide sequence. The recombinant fusion nucleic acids and polypeptides are useful for providing stable and high yield expression of fusion polypeptides of both cutantypotic and prokaryotic origin and to encode a protein product for use as an antigen for detecting serum antibodies. The presence of sexum antibodies to M. tuberculosis antigens in an individual indicates that the individual is infected with it. The fusion polypeptides are useful as proteins and as an immunogen to induce and/or enhance immune responses. The coding sequences can be ligated with a coding sequence of another molecule such as M. tuberculosis antigens, a cytokine or an adjuvant and can be used in vivo as a DNA vaccine. This polynucleotide sequence

The invention relates to a purified polypeptide which induces an immune response of Mycobacterium tuberculosis. Polypeptides of the invention are useful for diagnosing, treating or preventing M. tuberculosis infection, particularly tuberculosis infection. In particular, the polypeptides are useful as a vaccine formulation with an adjuvant to afford long-term protection in animals against the development of tuberculosis. The protein coding sequence may be used to encode a protein product for use as an immunogen to induce and/or enhance an immune response to M. tuberculosis. This sequence represents DNA encoding an M. tuberculosis tuberculosis. This sequence represents DNA encoding an M. tuberculosis fusion protein of the invention. This polynucleotide encodes 3 different proteins, each in a different reading frame. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    144
